

For Immediate Release

Shift Networks Expands Canadian VoIP Network with Common Voices

*Business Subscriber Growth Drives Expansion of
Next Generation Messaging Platform*

Calgary, Alberta and Cambridge, Massachusetts, November 29, 2005 -- Common Voices today announced that it has received a significant order for expansion of its NowMessage™ service from Calgary-based Shift Networks. Shift is using NowMessage to provide hosted Unified Messaging services to its small business customers in Canada.

“Shift has more than quadrupled its capacity since launching this service in 2004. This is a very rapid expansion and confirms the suitability of our NowMessage Unified Messaging services in the small- to medium-sized business environment,” commented Todd Hasselbeck, CEO of Common Voices. “We are very pleased to be working with a customer that is aggressively rolling out leading edge VoIP applications.”

NowMessage is a call answering and unified messaging application that solves the issues with proprietary voicemail systems for wireline and wireless carriers. It provides leading-edge enhanced services business users require on a standards-based, VoiceXML software architecture, using off-the-shelf hardware components.

Shift is also using Common Voices OpenLink™ VoiceXML browser and will add licenses for its OpenLink offering, too.

Rick Unrau, Chief Operating Officer at Shift, said, “With NowMessage and OpenLink we have been able to continue to offer highly reliable hosted services to our customers and to expand our offerings quickly and efficiently. Using Common Voices’ software-based solution, paired with our industry standard servers, we can respond to our customers’ needs as our market grows and that’s an important part of our offering.” Shift Networks is the first company in Canada to provide "business class" local telephone lines for small and medium business via broadband connection. Its hosted multi-line, business class Voice over IP solution provides businesses with leading edge telephone system and services that are centrally hosted at Shift's carrier-class data center.

About Common Voices

Based in Cambridge, MA, Common Voices (www.CommonVoices.com) is a privately held communications software and professional services company. It develops voice, video and enhanced services applications for next generation VoIP, wireless and wireline carriers, which solve customer service challenges and generate new sources of revenue. The Company also provides hosted services and helps carriers manage

network upgrades through its patent-pending migration capability that moves voice and data content between networks, disparate systems and even different operators.

About Shift Networks

Shift Networks (www.shiftnetworks.com) is a leading provider of On Demand applications for small business. Delivered via dedicated, secure Broadband connections Shift's services include Voice over IP (VoIP) multi-line telephone services, e-mail and desktop collaboration services for small business clients. Shift's unique hosted services provide enhanced features, quality, control and savings for small businesses. Shift Networks trades on the TSX Venture Exchange under the symbol "SHF".
